SCD Announces Grand Opening of New Facility ***Event to be held on Thursday, November 4th***

(Kansas City)—Sustainable Community Development, L.L.C. (“SCD”) announces the opening of its new manufacturing and international sales facility located at 1327 East 9th Street, Kansas City, Missouri. SCD and the Kansas City Chamber of Commerce will host a ribbon cutting ceremony on Thursday, November 4th at 4:30 PM. SCD is an innovative, entrepreneurial business that is socially responsible and committed to developing and selling products and services that are life enhancing and environmentally friendly.

“We are very excited about the direction and future of our company. SCD is a perfect example of combining Kansas City’s rich history in livestock and farming, with its strategic investment in biotechnology. This facility, along with our alliances with local laboratories and universities, will allow us to continue to research and refine our products, as well as to manufacture in compliance with applicable regulatory agencies,” said Matthew Wood, Managing Partner, Development & Technology. “One of our key corporate goals is to be a profitable model of social and environmental sustainability, providing next generation products based on life sciences. This facility will accomplish that.”

The new facility will support the growing demand for natural, microbial based products and services that have a positive, vitalizing and life enhancing impact on human health and environmental systems.

“The investment in our facility will support current manufacturing, distribution, and R&D, as well as, accommodate our plan to create new jobs and increase production” added Arthur Brookfield, Managing Partner, Finance & Operations. “In addition, the new facility uses green building techniques, is energy efficient and is a showcase for investors and clients. We are excited to participate in the investment in downtown Kansas City.”

About SCD

Founded in 1998, SCD works with a natural biotechnology that utilizes beneficial and effective microorganism (EM) technology. SCD’s approach to introducing EM is two-fold. First, it distributes consumer products for human health and environmental sustainability. Secondly, it works with progressive, environmentally conscious companies to co-develop industry changing applications in the fields of human and animal health, crop agriculture and wastewater reclamation.
