SCD Product Featured in Washington Post ***SAEM neutralizes odors and toxins caused by mold***

(Kansas City, MO) – SCD, LLC. (Sustainable Community Development), a leading producer of biotechnology, was recently featured in an article by Louisa Jagger in the Washington Post.

Ms. Jagger authors an ongoing column for the Washington Post entitled “Safe Keeping”. In the August 3 edition, the article “Summer Nice Smells, Summer Not”, SCD’s SAEM (Super Activated Efficient Microbes) was highlighted as an environmentally safe and natural way to neutralize odors and toxins produced by mold. As stated in the article, “Mold, mildew, pets and active kids are primary sources of summertime odors. Now there are non-toxic ways to stem the stench”.

SCD EM technology is the basis for these new ground-breaking, probiotic products, which harness nature’s beneficial microorganisms to regenerate healthy bacteria in an area. These beneficial and healthy microbes can then dominate an environment, helping to control the emergence of harmful bacteria. SCD will be launching in September two ready to use, all-natural probiotic products, SCD Bio Klean™ and SCD Odor Away™. SCD Bio Klean™ is an all-natural, multi-purpose industrial cleaning concentrate, which is also effective at neutralizing odors and toxic substances produced by mold. SCD Odor Away™ is an all-natural, biological odor reducer which controls odors through microbial digestion of toxic compounds.

“Nature provides the path to healthier living”, states Matthew Wood, founder and CEO of SCD, LLC. “We are pleased to be recognized in the Washington Post for our natural and organic products that solve common industrial and household problems. We are providing a safe alternative to harmful methods of cleaning and odor control.”

About SCD

SCD is a leading producer of a natural biotechnology that utilizes beneficial and effective microorganism (“EM”) technology. Founded in 1998, SCD market approach is two-fold. First, SCD markets all natural EM-based products to consumers for health, home and garden uses. Secondly, SCD works with industrial partners to develop industry changing applications using EM technology in the fields of organic agriculture, animal health, waste remediation and industrial clean-up.
