

## **SCD Probiotics® Announces New International Distributor of Microbial Ag Products**

---

*New Agreement Fuels Further Global Expansion of Bio-Based Alternatives that Increase Yield and Feed Conversion*

TULARE, California – February 13, 2017 – At the 2017 World Ag Expo, SCD Probiotics is pleased to announce the addition of FarmHannong Co. Ltd. to its growing distribution network in more than 30 countries.

FarmHannong Co. Ltd., part of LG Chemical, the largest chemical company in South Korea, is distributing a livestock odor control product, SCD OdorAway™.

“We welcome this new distributor of SCD Probiotics to our impressive lineup of companies who are leading the way in the natural food movement,” said Matthew Wood, CEO and Founder. “It is further evidence of the global interest in using fewer agrochemicals and more natural means to raise livestock and grow crops.”

For the past 60 to 70 years, agriculture has been focused on chemistry to increase yields and manage fertility, while biology has been largely overlooked. However, innovations in microbial additives and natural growth promoters have brought biology back into the spotlight in America and globally. Leading

agricultural companies, including chemical companies, are increasingly seeing the benefits of natural, sustainable solutions to problems previously addressed only with chemicals.

“We are excited to offer alternatives to the use of chemicals in agriculture,” Wood said. “The choices we make about the products we use today have an impact on our lives and those of future generations.”

SCD Probiotics offers microbial additives that are 100% bio-based and developed through a proprietary process whereby multiple strains of microorganisms are grown together to make bio-chemical products. SCD Probiotics’ products are all-natural and OMRI-listed for organic use, and not chemically synthesized or genetically engineered or modified.

SCD Probiotics leading products include the following:

- **SCD BioAg®** – A microbial additive that introduces beneficial soil microorganisms into soil to dominate harmful ones. SCD BioAg is an all-natural, shelf-stable, concentrated liquid that improves overall yield, soil quality and fruit quality. It also enhances nitrogen fixation. Free samples of SCD BioAg are available at the SCD Probiotics’ booth (#5204) at the World Ag Expo.
- **SCD BioLivestock®** – A probiotic feed and water additive for livestock and poultry that transforms the underlying, imbalanced ecology of the animal to a balanced, healthy one. This product can increase livestock and poultry production, generate improved feed conversion ratio (FCR) results in poultry, and offer an alternative to traditional growth promoters.
- **SCD OdorAway™** – Using consortia technology, this product neutralizes odor-causing organic compounds on contact. It provides an excellent solution to decrease foul odors in livestock operations, poultry pens, barns and waste lagoons.

World Ag Expo is the largest outdoor agricultural exposition. It has officially been designated by the U.S. Department of Commerce as an affiliate of the Foreign Buyer Program, which encourages exportation of American-made goods. The event runs February 14-16 in Tulare, California. For more information, visit [www.worldagexpo.com](http://www.worldagexpo.com).

SCD Probiotics will exhibit at booth #5204. Media wishing to interview SCD Probiotics’ CEO should contact Bee Wood at [bee.wood@scdprobiotics.com](mailto:bee.wood@scdprobiotics.com) or (913) 541-9299.

#### About SCD Probiotics

Founded in 1998, SCD Probiotics manufactures beneficial microorganisms through a patented, proprietary process called consortia technology. The company’s products are used in farming, animal health, odor control and waste treatment on six continents. SCD Probiotics is renowned for its expansive global network of licensees in more than 30 countries and its unique, high-quality probiotic products that offer great efficacy. To learn more, visit [www.scdprobiotics.com](http://www.scdprobiotics.com).
