

"The choices we make about the products we use and how we operate our businesses have an impact on our lives and those of future generations."

Matthew Wood, CEO and Founder

As a global leader in probiotics-based technology, it is our responsibility to create products that are environmentally sound. For the last decade, we have worked diligently to find the best solutions for agriculture, home and garden, livestock, industrial, and environmental applications. The result? Probiotic solutions comprised of unmatched microbes.

Made by Nature, for Nature

The key to our success is staying true to our founder's vision of "harnessing nature's ability to restore personal health & the environment™." Building upon this powerful foundation, the scientists at SCD Probiotics have taken things one step further with **consortia technology**, which allows for microbial co-growth that enables each strain to interact with each other, creating a small eco system - much stronger and capable of working together.

Benefits of Consortia-grown Microbes:

- **Superior Effectiveness** – Our multi-strain probiotic formulas consistently outperform single-strain cultures.
- **Long-lasting Shelf Life & Stability** – Our Mother Cultures have an impressive shelf-life guarantee of three years. All other products maintain a minimum shelf life ranging from 12-24 months.
- **Broad Temperature & pH Survival Range** – Unlike many microbial-based products, our unopened products do not require refrigeration, which offers both manufacturers and consumers the freedom to enjoy peace of mind.

About the Founder

SCD Probiotics was founded by Matthew Wood in 1998. Since the beginning, he was a visionary, ahead of his time. With an extensive background studying the science of beneficial microorganisms, Matthew has developed an array of probiotics-based goods. What makes Matthew's story special is what, or rather who, inspired him to seek a brighter future.

His interest in a sustainable future was fueled at an early age, when his mother was diagnosed with Leukemia in 1989. Although she passed away five years later, Matthew believed that an important lesson could be learned from her story:

The environment she lived in and the food she consumed may have had an adverse effect on her health over a period of years. In a quest to foster social change, Matthew Wood and SCD Probiotics continue to develop technology that facilitates models of sustainability.

Partnering Opportunities

- **Licensee** – Through a continued partnership, you'll have the ability to produce and sell products made with our proprietary formula. Simply choose your market segment and/or geographical territory, and you'll become an official licensee of SCD Probiotics.
- **Distributor | Wholesaler | Retailer** – With volume discounts on the purchasing of our ready-made products, you'll be able to buy and sell in no time.
- **Strategic Partnerships** – Whether you are looking for a private-label opportunity or in need of a custom-tailored ingredient solution, we have your production needs covered.

Probiotic Product Offerings

We have a broad spectrum of products available in the following areas:

- Human Health
- Animal Health
- Home & Garden
- Agriculture & Livestock
- Bioremediation
- Tannery
