

ALL SEASONS INDOOR COMPOSTER[®]

All Seasons Indoor Composter[®] Kit is the perfect starter kit for composting food waste and meat in your home. The kit contains one 5-gallon container and one 1-gallon bag of All Seasons Bokashi™.

Choose from two colors: Tan (virgin plastic) or Black (75% post-consumer recycled plastic)

What's Included:

- Airtight lid for faster breakdown
- Spigot allows for easy removal of liquid-rich compost tea

Volume Capacity: 5 US-gallons - .67-cubic feet - 640-fluid ounces.

All Season Indoor Composter is made with high quality plastic. An independent laboratory study found that the plastic used to make the bin does not weaken during the decomposing process. Lower quality bins made with inferior plastics weaken during decomposing, potentially leaching harmful chemicals into your compost, like lead and other heavy metals.

ALL SEASONS INDOOR COMPOSTER

3 Easy Steps

All Seasons Indoor Composter kit

is a unique, in-house system used to recycle kitchen scraps into an organic compost. The most effective method of composting is through anaerobic (without oxygen) environment. This process prepares the scraps for burial in less than half the time of conventional composting methods without any unpleasant odors. Food waste and even meat can be included in the composting process.

The **All Seasons Indoor Composter** includes two unique features: the strainer and spigot, which allow the moisture released by the scraps of food waste to be drained out to prevent spoilage. This liquid can be used as a fertilizer for household plants (1:100 dilutions) or to clean your kitchen and bathroom drains (undiluted).

The **All Seasons Indoor Composter** can be easily integrated into an indoor environment, making it useful for apartment, school, household, restaurant, business, or wilderness use. Each composting kit comes complete with instructions and one 1- gallon bag of All Seasons Bokashi™. The All Seasons Indoor Composter, used in conjunction with All Seasons Bokashi™, helps with the breakdown of compost.

The SCD Probiotics® Standard

CEO and Founder Matthew Wood began integrating probiotics into a wide spectrum of consumer applications –home composting included--over a decade ago. As SCD Probiotics explored new scientific territories, we forged the way to the future with unmatched probiotic technology.
